Graduate Roles 2021

Roles available at our exciting enterprise Cloud consultancy working with large customers across the UK from our office in Swansea, enabling their transformation using public cloud, data and AI services.

Full Stack Developer

Working within and across the sprint team you will develop and deliver high quality and robust software using your Django/React or similar development experience and have a strong desire to use cloud native technologies and serverless approaches across AWS, Azure, GCP and Kubernetes. You will develop front end architecture, ensuring responsiveness of applications, and developing back-end applications. This is an excellent opportunity open to anyone with a passion for learning and an interest in further progressing their Full Stack development skills.

Agile Delivery Manager

We are looking for someone keen to progress in a career in Agile IT Project Management working with large customers across the UK, enabling their transformation using public cloud, data and AI services, providing the opportunity to develop your experience and accelerate your career in an Agile Delivery manager.

DevOps Engineer

Deploy, manage, and operate scalable, highly available, and fault-tolerant systems on AWS and Azure (public cloud). Migrate on-premises workloads to cloud. Implement and manage continuous delivery systems and methodologies on cloud. Design, manage, and maintain tools to automate operational processes. Define and deploy monitoring, metrics, and logging systems. Work within Sprint teams and alone on critical cloud projects.

Service Designer

Undertaking full business analysis activities for designated projects/customers, working collaboratively with project managers, customer stakeholders' representatives, end-users and technical teams. Aligned to GDS framework best practice, you will establish and follow agreed analysis processes, methodology and standards ensuring the delivery of an efficient and effective business analysis function for our customers.

Data Engineer

You will work collaboratively with a team of product managers, data analysts, architects, engineers, governance specialists and operation experts to deliver high quality data outcomes. You will do this via modern data sourcing, integration and modelling techniques, working as part of a small tight knit team. Design well-structured tables that are structured for wide-spread use (i.e. using Kiball Modelling). Automate tasks and deploy production standard code. Understand complex requirements and break down into actionable chunks of work.
